## Footnotes

<sup>1)</sup> A complete table of assay results from all deposits and all secondary zones intersected utilizing a 0.20 gpt Au cut-off is on the Company's website.

<sup>2)</sup> Estimated True Widths (ETW) are estimated based on drill hole geology or comparisons with other on-section drill holes.

<sup>3)</sup> Au Equivalent (AuEq) is calculated as Au gpt + (Ag gpt x (\$22/\$1700)) where \$22 and \$1700 are the price of one ounce of Ag and Au respectively (in US dollars).

<sup>4)</sup> Composite assay grades presented in summary tables are calculated using a Au grade minimum average of 0.20 gpt or 1.0 gpt as indicated in "Au Cut-off" column of Summary Tables. Maximum internal waste included in any reported composite interval is 3.00 m. The 1.00 gpt Au cut-off is used to define higher-grade "cores" within the lower-grade halo.
